Phase 1

Live Cross-Chain Swaps -
Seamlessly Swap Between Ethereum, Base, Optimism, Avalache, Arbitrum, and Polygon.

Same-Chain Swaps -
Effortlessly exchange tokens within the same blockchain on supported blockchains.

Revenue system launched -
25% of revenue to eligible holders and 75% to buy back system initiated.

Privacy Swap Beta Testing -
Finalize development and testing of ChainSwap's beta version of the privacy swap feature on Ethereum.

Phase 2

Dispersion Technology Unveiled -
ChainSwap's innovative dispersion technology launches, offering a secure and efficient way to distribute your tokens.

Privacy Swap Launch -
Unleash the power of secure private token swaps for the public.

Multi-chain Decentralized Exchange Release -
Trade on multiple blockchains with ease, while also empowering projects to host their liquidity pools directly on the platform.

Phase 3

Limit Order Capacity added on CrossChain Swaps -
Take control of your swaps with limit order functionality on our Crosschain DApp.

Private Swaps Expansion -
Expanding privacy reach to other chains.

One-Block Transactions-
Aim to achieve one-block transaction confirmation through CCIP, if supported.

Multi-Chain ENS Integration -
Simplify blockchain interaction with multichain ENS support.

Accessibility Tools Released For Utilities -
Integrate with Telegram for convenient access to ChainSwap's utilities.

Phase 4

Multi-Chain Privacy Swaps -
Combining ChainSwap flagship protocols to create the first cross chain privacy swaps.

Cross-chain Integration beyond EVM -
Explore the integration of non-EVM compatible chains.

Swap Aggregator Integration -
Enhance swap efficiency by integrating an aggregator to find the best rates across various DEXs.
